DEPARTMENT OF BIOTECHNOLOGY

FIELD TRIP to Vermicomposting farm, Venkatakrishnapuram, Dwaraka Tirumala, West Godavari district.

REPORT

An educational field trip was organized by the Department of Biotechnology on 26-11-2021 to Vermicompost farm at Venkatakrishnapuram, Dwarakatirumala mandal, West Godavari dist. In this tour 2 staff members and 25 students were participated. We started in the college at 6:00 AM and reached the vermin compost farm at 10:30 AM. The centre is located 200 Kilometers away from the college and 15 Kilometers away from the famous pilgrim centre Dwaraka Tirumala. The Student group was lead by Mr A.R.K Reddy, HOD Biotechnology department.

The Vermicomposting centre present at Venkatakrishnapuram was started 20 years back by Sri T. Satyanarayana an eminent Agriculturist. He gave an overall view of vermin culture and the process of vermin composting. Vermiculture is nothing but the cultivation of earthworms and Vermicomposting is the process by which the earthworms are used to convert the organic waste materials into humus like material known as vermicompost.

The process of Vermicomposting starts with the construction of vermibeds. He told that beds can be constructed of different sizes depending up on the space available and quantity of vermicompost to be produced. If there is no shade, sheds have to be constructed above the vermibed. Otherwise vermibed can be constructed under the shade of big trees like Neem. The vermicompost can be produced by using different types of raw materials like kitchen waste materials, agricultural waste materials and waste materials from animal husbandry. Care should be taken to avoid plastic and glass pieces in the compost which is used for vermibed. The bed should be sprinkled with water so that it is kept moist. If it is summer more water should be sprinkled. Then selected earthworm species must be released on to the bed. In this centre earthworm species namely *Eisenia foetida* is mainly used. The director of the centre stated that roughly 50-100 earthworms are present in the Sq. ft area and one kilogram contains 800-900 earthworms.

The earthworms used in the Vermicomposting are generally epigenic that live on the surface of the bed. The earth worms feed on the organic waste present in the bed. The excreta of earthworms is ejected through the anus in the form of fecal pellets or worm castings which look like sand crystals. In about six

weeks some worm castings are seen on the surface of vermibed. In 3 to 4 months, the bed is filled with rich black fertilizer comprising partially decomposed bedding and worm castings.

T. Satyanarayana has shown us the collection procedure of vermicompost. He told that the manual labor is necessary at this point of Vermicomposting. For each bed 4 to 6 people are employed to collect the material in the form of sand crystals into a sieve. The filtered part contains dry small pellets which are collected into gunny bags and plastic bags which are then sold to the farmers.

The director is also processing vermicompost by using plastic drums of about 3 feet in height. In this method, there is a method of collecting the liquid which comes down from the vermibed. It is called vermin wash. We can use the vermiwash as plant manure.

In these beds we collected earthworm cocoons and observed the emergence of small earthworms by pressing the cocoons. In each cocoon 3 to 4 earthworms are present. The director explained that 2 liquid manures called "jeevamrutam" and "panchagavva" are produced and used for the plants.

We thanked the director Sri T. Satyanarayana for explaining about Vermiculture, Vermicomposting process and clearing our doubts. After completion of field trip, we visited Sri Vekateswara swamy Devasthanam at Dwaraka Tirumala and had our lunch there itself. We returned back to the college around 5:30 pm hoping to start a vermicompost bed in the college campus by utilizing the college canteen waste that is vegetable and food waste for this purpose. All the students felt that the trip is knowledgeable, skill based and also enjoyable. We thank our Principal Dr K. Veerraju, and Secretary and Correspondent Sri Ch. V.K Narasimha Rao for providing all the necessary requirements for the field trip.

Problem Code: BULLBEAR

Statement Submissions Comments

Problem

Chef is on his way to become the new big bull of the stock market but is a bit weak at calculating whether he made a profit or a loss on his deal.

Given that Chef bought the stock at value X and sold it at value Y . Help him calculate whether he made a profit, loss, or was it a neutral deal.

Input Format

- The first line of input will contain a single integer T , denoting the number of test cases.
- Each test case consists of a single line of input containing two space-separated integers X and Y , denoting the value at which Chef bought and sold the stock respectively.

Output Format

For each test case, output PROFIT if Chef made a profit on the deal, LOSS if Chef incurred a loss on the deal, and NEUTRAL otherwise.

The checker is case-insensitive so answers like pROFIT, profit, and PROFIT would be considered the same.

Constraints

- $1 \leq T \leq 500$
- $1 \leq X, Y \leq 100$

Sample 1:

```
1 #include <iostream>
2 using namespace std;
3
4 int main() {
5     // your code goes here
6     return 0;
7 }
